HABI APULIA
Cross-Platform (Flutter)

A tourist-based exploring app that is lively used in ITALY. It has interactive maps on the phone that will help tourists explore attractive locations and lesser-known coves to ensure an authentic experience. It also helps to find restaurants, transport, and the culture of ITALY.
Android: https://play.google.com/store/apps/details?id=com.tekmore.habi
ios: https://apps.apple.com/mk/app/habi-apulia/id1633983284

RADIO NLP
Cross-Platform (Flutter)

Radio NLP collects a bank of training programs, interviews, and lectures from researchers and NLP educators around the world, and after classification presents them to you via radio and social media.
link: https://play.google.com/store/apps/details?id=com.farhan.radionlp

MASK DETECTOR
Cross-Platform (Flutter)

An AI-based flutter application that can able to detect masks on the face. Here I'm using the TensorFlow model to detect masks.
link: https://github.com/farhansadikgalib/mask_detector

PROTTOYON
Native Android (JAVA)

Prottoyon is a smart mobile application that is developed for govt. purpose. In our country, every district & sub-district office provides certificates like charity, birth, marriage, etc. It needs to verify all the information of the person to provide the certificate. By using this app all this verification easily happens here without any delay.
link: https://play.google.com/store/apps/details?id=prottoyon.gov.bd.app

CHARITY
Native Android (JAVA)

Charity is a smart mobile application that is developed for govt. purpose. In our country, every district & sub-district office provides funds for Education, Health, Disaster, etc. It needs to verify all the information of the person to provide the funds. By using this app all this verification process easily happens here without any delay.
link: https://play.google.com/store/apps/details?id=com.farhan.charity

ATTENDANCE SYSTEM
Native Android (JAVA)

This attendance system has an attractive UI design. There are three types of roles here. The roles are admin, teacher, and student. Admin Can added information on student and teacher information and can be allocated courses to students. The teacher can take student attendance live and can view student attendance. And students can view their attendance by selecting a specific course.
link: https://github.com/farhansadikgalib/Attendance-System

TWINKLE TWINKLE
Native Android (JAVA)

It's a WhatsApp clone app. where users can send friend requests and messages, and also share emojis and images.
link: https://github.com/farhansadikgalib/Twinkle_Twinkle
